

# Prepare for climate disclosure regulations: Your 5-step checklist

As governments turn up the dial on climate disclosure, sustainable practices are no longer a nice-to-have – for many businesses, they're a legal imperative.

Both the EU and UK now require large companies to report on their carbon emissions. Amid plans to expand these requirements, companies of all sizes should get ready to disclose their climate impact and their plans for reducing it.

In procurement, you play a strategic role. Your insights into the value chain help your business gain a comprehensive understanding of its progress towards sustainability goals.

Here are 5 key capabilities you need to effectively measure, manage and report your company's carbon footprint.

## Climate disclosure regulations in Europe

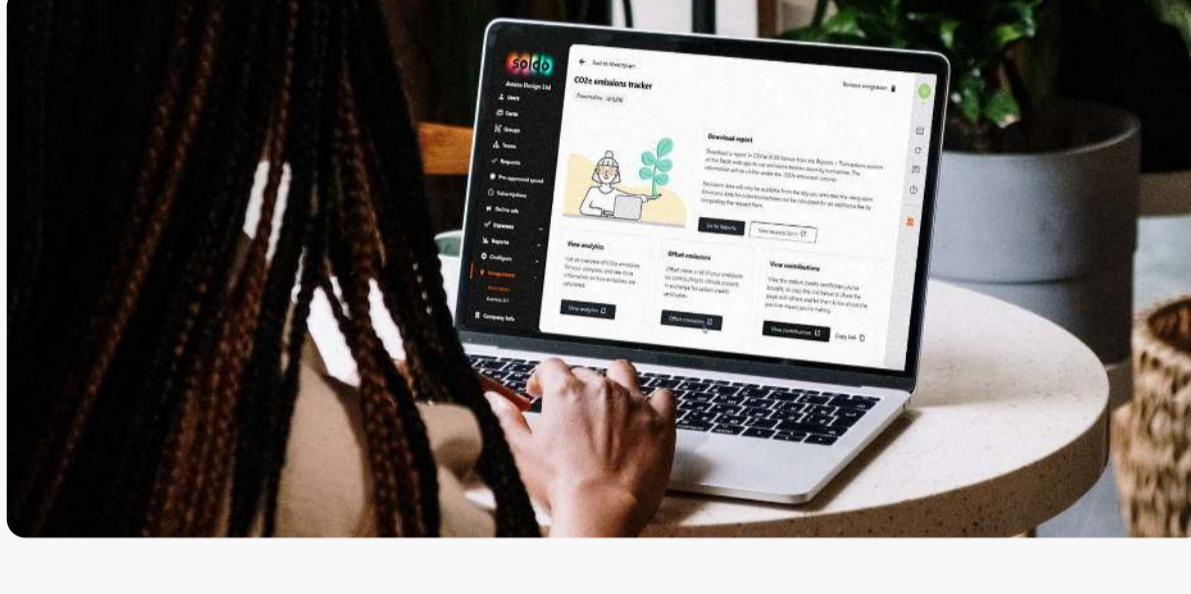

Region	Directive	Key requirements
UK	Sustainability Disclosure Requirements	Mandates disclosure of Scope 1 and 2 emissions for large companies. Scope 3 required only in certain cases.
EU	Corporate Sustainability Reporting Directive	Mandates disclosure of Scope 1, 2 and 3 emissions for large companies. SMEs required to report from 2026.

## 1 | Track all emissions, including Scope 3

Obtaining a complete picture of your company's carbon impact is crucial, including the Scope 3 emissions that arise in the value chain. In the EU, this is mandatory for large companies.

### How Soldo helps

Use Soldo's CO2e tracker to automatically calculate the carbon impact of your decentralised spending, such as business travel and purchased goods, simplifying the tracking of these high-volume transactions without the need to manually extract data.

## 2 | Analyse emissions data

With a detailed breakdown of your carbon emissions, you can identify the primary sources, set achievable reduction targets, and focus your resources on the areas with most impact.

### How Soldo helps

Get a comprehensive overview of the carbon impact of your decentralised purchases, broken down by transaction and activity.

## 3 | Automate reporting

Collecting and reporting emissions data can be complex and time-consuming, especially for Scope 3 emissions. Automating these calculations allows you to focus on the findings, not the process.

### How Soldo helps

Use Soldo to download a report in CSV or XLSX format from your web app, giving you a complete, instant and accurate picture of emissions.

## 4 | Offset your emissions

As well as tracking carbon impact, companies are required to outline plans to address it. One approach is to offset unavoidable emissions by contributing to global sustainability projects.

### How Soldo helps

Choose to contribute to climate change projects vetted by our partner Lune in exchange for carbon credits certificates.

## 5 | Show your commitment

Highlight your carbon reduction achievements with certifications that help build trust with stakeholders and customers.

### How Soldo helps

Each carbon credit from Lune is certified, providing you with carbon offset certificates that you can share to show your commitment to sustainability.

## Brooks Running goes the extra mile

Brooks Running recently signed the Amazon Climate Pledge. Without Soldo, they would have had to call every employee on the road to keep track of their mileage and fuel use. Instead, they can now pull all this information from Soldo – without using paper.

**“It just made it much easier for us because it's all consolidated in one place”** says Vernon, Accounting Manager at Brooks. **“Our sustainability team use this data for it to them, we're able to provide it to them, which was a big hassle before.”**

## Soldo: supporting sustainable procurement

Soldo is the platform that simplifies decentralised spend management, allowing procurement to track vital data like carbon emissions and proactively support your company's sustainability goals. Use Soldo to embed carbon credits and emissions calculations into vendor information, automatically calculate emissions, and easily export data for external reporting. Build transparency, meet compliance requirements and drive progress towards a more sustainable future.
